22nd October USA Digipak CD

FERAL VAPOURS OF THE SILVER ETHER the new album by CARTER TUTTI

Conspiracy International are pleased to announce the much-anticipated new album by Carter Tutti, entitled Feral Vapours of the Silver Ether. Almost three years in the making, the eleven tracks on Feral Vapours mark an exciting and fecund sonic development for the influential electronic duo, as always with a glance to the past and a hard stare to the future. With their previous album Cabal (Conspiracy International 2004), Carter and Tutti initiated their new phase with a gentler and strikingly emotional collection of songs, and on Feral Vapours this renewed vision takes centre stage: the album is awash with echoes of the sea, the moon, the open road, and flatlands. Nature oozes through songs such as 'Torn Window' and 'Forest Floor', and the electronic and the acoustic are merged in a seamless, crafted, dense electronic masterpiece that is sure to become an important milestone in their already vast, eclectic body of work.

Their renowned classic heartbeat dance grooves have become more subtle, the rhythmic, orchestral beats and massive bass undercurrents that have made Chris Carter one of the UK's foremost electronic composers are made fleshly and womb-like; Cosey's elemental vocals glide over these songs, occasionally mediated by her virtuoso slide-guitar glissandos and striations and a splash of gutsy, raunchy cornet. Feral Vapours stands as one of Carter Tutti's most important releases to date - a rich and accessible collection of electronic torch songs that is sure to appeal to any fan of intelligent, sensitive and innovative music.
